Ryan 8/17/2026

Current events

Company did a reveal in the 7+5 forecast

Payer is positive

Below plan

All team meetings were cut

All open headcount was closed including backfills

4 IC roles were approved as exceptions

Provider had 18 roles open, 16 were closed

Security had all been postponed.

P4 and a P3

Have people in the pipeline

4-5 months ago the life science did a total relocation to barcelona

Kevin and Magaly were going to move, so they have some baggage

Both P3s

Kevin was viewed as a promo to P4

Feb/August are performance cycles. Feb is comp cycle

Kevin really needs to understand how to get promoted

Making \$236k, P3 tops at \$225 so no room for increases

Vince is the last remaining SME for the team

Top tier 1 companies

Optum
Centine
Elevant

New system is called Switchboard
Has a data model for the whole system
Has a legacy data model named IDSB

Pipelines
Traditional - Manual, digital, etc.
Info Requests - Member, provider
Member locator - Great success but lives on the IDSB data model
Provider locator sits between the projects

- Only uses digital retrieval methods.

Ryan 8/19/2026

Focus on keeping support at 2 people as much as possible

Worried about execution of last 2 items on the list

2024/2025
Hired a PM named Lilly was fired in Aug 2025
Connor joined Dec 2025 as new PM
In Feb 2025 there was an internal transfer EM who got pulled back in 2 weeks
Then hired an EM name Vincent who was not good.
Dude put in notice when Ryan got back from paternal leave
Allen joined November 2025, left in May 2026
Vince did some interim until Tim took over for the past month

Ryan 8/20/2026

Discuss the two options for hiring

- Alex
 - Life Sciences and Payer work differently

- Payer is really up a notch from LS
 - More clients
 - More revenue
 - More stress
-
- Stephen
 - My concerns here are the fact that we have Magaly and from what I understand, she needs some mentorship to help her grow. Perfectly fine because she wants to, but to put someone downleveled and a soft yes into the mix may cause more harm at this point.
 - Based on what I saw in the interviews, I would actually pass.

Vince felt weird telling everyone what to do at the stand up. Talk to Vince about this.

Ryan 8/21/2026

- Approve P4 JD
- Talk about Vince discussion
 - Magaly as a blocker
 - His mindset
- DSU results

Questions for Day 2

- Mobile instructions
- List of all resources I need to request access for

Connor 8/18/2026

Joined in December

Last EM was an internal hire and was just moving over

Probably burnt out a bit

The previous EM and PM left

Team has been through a lot of transitions

Vince is OG with historical knowledge
Feels there is a lot of risk with Vince
Lot of timeline pressure
Tim Song stepping in has significantly helped

Lives in Denver
Into the out doors

Need to focus on features and tech debt
Too support focused
Need to be able to hire people and get them up to speed

I need to talk to Vince and make sure he feels supported

Support. Putting me on for the next two weeks
Shadow other team members

Support rotation
On for about a week
Currently have all 3 members on support asks because of the amount
Trying to reduce support for the 10/1
Vince gets pulled in a lot
Vince doesn't always trust others to take it on
Gets pinged a lot

Vince gets pinged
From other engineers asking for opinions and reviews
Incidents, especially Member locator
PPI - Support process where EM/PM triage prior to get to the engineers
PPPI - Internal support things
Internal stakeholders will tag him because he has knowledge

Vince may be at Risk

Retro 8/18/2026

Longed For

- End of Support / End of Moxe
 - Theme that is ongoing
- Time to focus on Meta/process improvements
 - Vince hasn't had time to work on this
 - Has to validate documentation and get it working
 - Too many urgent fires
 - Magaly has been asking Claude to read code and update documentation
- One consistent place for support asks : Better alignment / continuity on reroute support : Better triage of support tickets with clear expectations on who does it.
 - Connor does a lot of triage
 - Reroute script keeps getting run over the past 3-4 weeks
 - Closing out tickets just saying done, but might not be what stakeholders expect
 - Team has messiest data and support tickets
 - Not enough space to dig in so sometimes just do what is being asked instead of trying to figure out if it is something else
- How do high priority tasks get to the team
 - We talked about the tickets that make it to the team and what happens when they don't make it.
 - Is there going to be an avalanche of tickets once these new features are complete
- How do we interact with billing / finance

Loathed

- Not a clear understanding of goals
- Not full understanding of system
- Context switching
 - Action item for Connor, Vince and I to review how to onboard people
 - Didn't have good acceptance criteria and let in some scope creep for one of the projects.
 - Need to really think about scope creep and how tickets get created/refined/worked on.
- Timeline commitments ahead of Engineering Discovery
 - Lagging edge of how we do projects right now
 - Now at risk for features and why we have a lot of high priority work

- Changing priorities
 - Need to really focus
 - There was contractual renewal risk that caused the shifts recently.
 - Might need to review the gaps between old system and new system
 - Need better ways to understand our clients
 - As an Engineer it is hard to understand the importance of a record request.

Tim Song 8/18/2026

- Visibility into what is in flight has been his biggest struggle
 - Had to rework the board to make it easier
- Triaging of how to bring work to the team
 - Talking through tickets
 - Connor has been discussing things directly with engineers instead of the team
- Onboarding is horrible
- Testing is hard because there isn't a lower environment so it is done in Prod
- DLQs
 - Issues with system accuracy within the platform itself
 - Passing messages between queues
 - About 30-40 queues to drive work
 - Giant spike in messages going to the DLQs
 - Been a struggle to track them down
 - Part of the issue with knowing where inventory is
 - Not enough time
 - Ryan is going to have peeps do it for the zone instead of being on the team
- Vince
 - Core of the team
 - Only one with original routing context
 - He is the bottleneck
 - He is very strong
 - Has strong opinions
 - Does tend to get verbose at times when talking about them
 - Ryan leans on him heavily
 - Only person with real context on Member Locator
 - He is burning out because he is carrying a lot of load due to departures
 - Vince was doing sessions with different topics to transfer knowledge
- Kevin
 - Strong engineer
 - Curious and will dive deep into things
 - Confident in throwing him into the deep end.

- Is being encouraged to write more documentation and share more
 - Came over from life sciences vertical
 - Was being put up for promotion at that time, but it was taken away from him
 - Might be a retention risk
 - Top of the pay band at the next level
- Magaly
 - She is a P3 and at the right level
 - Needs a little more hand holding because of her level
 - Needs more guidance if asked to do something
 - Clear acceptance criteria
 - Positive influence on the team.
 - Think about how to give her more ownership
 - Very creative and passionate
- Ma Ga Ly
 - The team had no processes when Tim came on board 4-5 weeks ago.
 - Brought back refinements and retros
 - Make sure to continue retros
 - Needs to be more process. They were throwing things at the wall and go with it.
 - Triage of support tickets needs some assistance. Connor tends to group things together that shouldn't have been grouped.
 - Understanding the whys when new work comes in
 - Giving time to the engineers to build out technical documentation
 - Root cause of support tickets
 - Core problems come from matching and data foundations
 - A lot of re-routes happen because of that.
